PROFESSIONAL SUMMARY

Software Engineer with nearly 7 years of experience building and modernizing enterprise applications across healthcare, warehouse management and supply chain. Strong in Java 21, Spring Boot, SQL, AWS, Kubernetes, microservices and distributed systems. Delivered cross-cloud migrations, HIPAA/PHI data pipelines, storage modernization, performance improvements, observability and production releases for business-critical platforms.

TECHNICAL SKILLS

Languages: Java, SQL, JavaScript, TypeScript, C++
Backend: Spring Boot, Spring MVC, Spring Security, REST APIs, Microservices, JPA/Hibernate, Node.js, Express.js
Cloud & Platform: AWS (EKS, ECS, S3, RDS, Lambda, API Gateway, VPC, IAM, Route 53, SQS, Glue, Athena), Azure AKS, Docker, Kubernetes
Data & Messaging: SQL Server, Oracle, MySQL, MongoDB, Redis, Elasticsearch, Kafka, RabbitMQ, ActiveMQ
Observability & Delivery: Datadog, ELK, CloudWatch, GitHub Actions, Git, Maven, Flyway, Swagger/OpenAPI
Testing & Computer Science: JUnit, Mockito, TDD, System Design (HLD/LLD), Data Structures & Algorithms, Multithreading, Design Patterns

PROFESSIONAL EXPERIENCE

ResMed Technologies | Software Engineer | 19 Aug 2024 - Present | Bengaluru, India

- Built an AWS Glue ETL pipeline to migrate sensitive HIPAA/PHI data from SQL Server to Amazon S3 and enable analytics through Amazon Athena.
- Migrated customer-facing file storage from network-attached storage to Amazon S3 while preserving upload, download and update workflows for live products.
- Upgraded multiple production services to Java 21 and validated multi-tenant security, Okta authentication, Redis caching, SQL, Flyway and Swagger integrations.
- Migrated Java/Spring and JavaScript services from Azure AKS to Amazon EKS across DEV, QA, REG, pre-production and production environments.
- Re-platformed Azure SQL, Service Bus, Storage and Redis workloads to AWS services including RDS, SQS, S3 and managed Redis.
- Supported Azure-to-AWS and EKS migration activities and managed Route 53 DNS mappings for services deployed across Kubernetes environments.
- Delivered organization-wide knowledge-transfer sessions on cloud migration and Datadog observability to accelerate adoption across teams.
- Implemented Datadog dashboards, APM monitoring and alerts for latency, error rate, CPU and memory utilization to improve production visibility.
- Owned biweekly production releases and supported incident diagnosis and resolution for services maintained by the team.
- Deployed self-hosted Elasticsearch on EKS using StatefulSets with EBS-backed persistent volumes and claims.
- Managed public and private Kubernetes ingress configurations and contributed to identity and admin-management services across products.

Manhattan Associates | Senior Software Engineer | 01 Feb 2024 - 16 Aug 2024 | Bengaluru, India

- Built cloud-based warehouse-management services using Java, Spring Boot, SQL, TypeScript, React, AWS, Kubernetes, Kafka and Apache Camel.
- Contributed to administration tooling for customer-specific users, roles, permissions and product-access controls.

Manhattan Associates | Software Engineer | Feb 2022 - Jan 2024 | Bengaluru, India

- Developed enterprise enhancements using Java, Spring MVC, C++, JSP/XHTML, Oracle PL/SQL and React for warehouse and order-management products.
- Improved critical customer workflows by approximately 70% through SQL query optimization.
- Diagnosed Java and C++ production issues using GDB, heap-dump analysis and debugging of dangling pointers, stack overflows and memory problems.
- Delivered parallel Java and C++ implementations using established design patterns for complex product enhancements.
- Supported production go-lives and resolved critical defects with business analysts, consultants and onsite engineering teams.
- Worked on React and AWS EKS components supporting order-management workflows.

PROFESSIONAL EXPERIENCE (CONTINUED)

IQGateway | Software Developer | Dec 2020 - Feb 2022 | Bengaluru, India

- Built full-stack healthcare applications using Spring Boot, React, MongoDB and ELK for data preparation, insight generation, audit logging and system monitoring.
- Implemented ELK-based audit and system-log management and scheduled processing using Spring cron jobs and MongoDB.
- Applied reusable design patterns to improve maintainability across application modules.
- Improved performance and reduced memory leaks in Medicaid provider-enrollment workflows supporting state healthcare programmes in the United States.
- Designed authenticated data exchange between two healthcare platforms using data-requestor and data-submitter workflows.
- Containerized six Spring Boot microservices and authored Docker Compose orchestration from scratch.
- Deployed and supported containerized workloads on Amazon EKS.

VinnovateLabz | Associate Software Engineer | Sep 2019 - Sep 2020 | Bengaluru, India

- Built beverage-catalog and location-specific business-model modules using Spring Boot, MySQL and React for a Danish coffee-equipment manufacturer.
- Implemented the module responsible for introducing new drinks to connected brewing machines.
- Created regional business-model functionality for managing drinks and configurations across locations.
- Improved React application performance by approximately 25% using Hooks, memoization, Context and Reducer-based state management.
- Worked with AWS EKS/ECS and developed Node.js/Express proof-of-concepts on AWS Lambda.

EDUCATION

Bachelor of Engineering (B.E.) | Sir M. Visvesvaraya Institute of Technology | 2018
